Theoretical approaches for social work are often used to explain human behavior and serve as starting points for practice models and treatments. For example, Psychodynamic Theory explains how internal and external forces interact to influence emotional development. Conflict Theory explains how power structures and disparities affect people's lives. This post concentrates on how Systems Theory was developed and how it can be applied to assisting a client. Systems Theory explains human behavior as the intersection of the influences of multiple interrelated systems. Even for individual issues, families, organizations, societies, and other systems are inherently involved and must be considered when attempting to understand and assist the individual. Other editions. The process-structure approach of Living Systems Theory (LST) provides a more robust explanation of life than did the earlier explanations based on the concept of sense-response. Three aspects of LST, however, provide less robust explanations than those that generally characterize the theory. They are the concept of dispersed critical sub-systems, the relative neglect of emergence and the neglect of the pervasive influence of conceptual systems on LST defined information systems. This paper suggests an entity-systems approach that may strengthen those aspects of the theory of life systems.
