Changes of temperature and state. The two extracts below are from a basic technical training course for the customer service staff of a manufacturer of heating boilers. As you know, temperature is measured in degree Celsius ($^{\circ}\text{C}$). But heat is energy so it's measured in Joules. To calculate the amount of energy needed to raise the temperature of a substance, you need to know the mass of the substance being heated, and also the specific heat capacity – in other words, the amount of energy, in Joules, required to raise the temperature of one kilogram of the substance by one degree Celsius. 3. A. Ch... 36.1 Complete the sentences about water using words from A opposite. Sometimes there is more than one possible answer.
