Business & Information Systems Engineering (BISE) is an international scholarly and double-blind reviewed journal which publishes scientific research on the effective and efficient design and utilization of information systems by individuals, groups, enterprises, and society for the improvement of social welfare. Information systems are understood as socio-technical systems comprising tasks, people, and information technology. Research published in the journal examines relevant problems in the Business information systems are sets of inter-related procedures using IT infrastructure in a business enterprise to generate and disseminate desired information. Such systems are designed to support decision making by the people associated with the enterprise in the process of attainment of its objectives. ADVERTISEMENTS
