

Papermaking Science and Technology

a series of 19 books

covering the latest

technology and

future trends

Book 3

Forest Products Chemistry

Series editors

Johan Gullichsen, Helsinki University of Technology

Hannu Paulapuro, Helsinki University of Technology

Book editor

Per Stenius, Helsinki University of Technology

Series reviewer

Brian Attwood, St. Anne's Paper and Paperboard Developments, Ltd.

Book reviewer

Thomas Joyce, Western Michigan University

Cyril Heitner, PAPRICAN

Published in cooperation with the Finnish Paper Engineers' Association and

TAPPI

Table of Contents

1.	Structure and chemical composition of wood	12
2.	Basic chemistry of wood delignification.....	59
3.	Analytical methods	107
4.	Macromolecular, surface, and colloid chemistry	173
5.	Brightness reversion.....	279
	Conversion factors	333
	Index	335

CHAPTER 1

Structure and chemical composition of wood

1	Introduction	12
2	Fundamental structure of wood and fibers	13
2.1	Macroscopic structure	13
2.1.1	Cross-sectional appearance.....	14
2.1.2	Tree growth	17
2.2	Cell types	18
2.2.1	Softwood cells.....	19
2.2.2	Hardwood cells.....	20
2.2.3	Pits	22
2.3	Cell wall layering	24
2.4	Reaction wood	26
2.4.1	Compression and tension wood	27
2.4.2	Other special tissues.....	27
3	Chemical composition and distribution	28
3.1	Gross composition	28
3.2	Distribution of the wood constituents	31
3.3	Chemistry of the wood constituents	34
3.3.1	Carbohydrates	34
3.3.2	Lignin	39
3.3.3	Lignin-hemicellulose bonds.....	42
3.3.4	Extractives	43
3.3.5	Inorganic components.....	53
	References	55

CHAPTER 2

Basic chemistry of wood delignification

1	Introduction	59
2	Pulping methods	61
2.1	General aspects	61
2.2	Kraft pulping	62
2.2.1	Process description	62
2.2.2	Lignin reactions	64
2.2.3	Reactions of the polysaccharides	68
2.2.4	Behavior of extractives	72
2.2.5	Pulping by-products	73
2.2.6	Combustion of black liquor	76
2.2.7	Chemical modifications to improve yield	77
2.3	Sulfite pulping	78
2.3.1	Pulping systems	78
2.3.2	Reaction of the wood constituents	81
2.3.3	Spent liquor utilization	85
3	Oxygen-alkali delignification	86
3.1	General considerations	86
3.2	Basic chemistry	88
3.3	Reactions of the pulp constituents	89
4	Bleaching	93
4.1	Principles and definitions	93
4.2	General reactions	98
4.2.1	Lignin	98
4.2.2	Carbohydrates	100
4.2.3	Extractives	100
	References	103

CHAPTER 3

Analytical methods

1	Introduction and scope	107
2	Different analytical objectives and methods	108
2.1	Analytical objectives and planning	108
2.2	Types of samples in pulp and paper industry	109
2.3	Off-line and on-line analysis	109
2.4	Standard methods and research methods	109
3	Basics of common chromatographic and spectrometric techniques	110
3.1	Liquid chromatography	110
3.2	Gas chromatography and mass spectrometry	111
3.3	UV-Vis spectrometry	112
3.4	Infrared (IR) and Raman spectrometry	113
3.5	NMR spectroscopy	114
3.6	MALDI-TOF-MS	115
3.7	Instrumental techniques for inorganics	115
4	Aspects of sampling and sample storage	117
5	Sample preparation	117
5.1	Drying and grinding	117
5.2	Moisture determination	117
6	Isolation and structural determination of wood and pulp components	118
6.1	Cellulose and hemicelluloses	118
6.2	Lignin	124
6.3	Extractives	128
6.4	Analysis of sulfate soap and tall oil	132
6.5	Inorganics	132
7	Direct summative analysis of wood, pulp, and paper	134
7.1	Spectrometric and chromatographic determination of wood components	134
7.2	Determination of functional groups	135
8	Spectroscopic determination of surface composition	137
8.1	ESCA	138
8.2	Secondary Ion Mass Spectrometry (SIMS)	141
9	Analysis of nonwood constituents in paper and paperboard	143
9.1	Latex and other coating components	143
9.2	Starch	143
9.3	Sizing agents	144

CHAPTER 3

9.4	Cellulose derivatives	147
9.5	Miscellaneous additives	147
10	Analysis of deposits and specks	148
10.1	Direct analytical methods	148
10.2	Fractionation and analysis	149
11	Analysis of kraft pulp mill liquors and effluents	152
11.1	Organics in kraft cooking liquors	152
11.2	Organics in spent bleaching liquors and kraft mill effluents	153
12	Analysis of paper mill process waters and effluents	154
12.1	Separation of dissolved and colloidal substances	155
12.2	A practical integrated analytical scheme	155
	References	158

CHAPTER 4

Macromolecular, surface, and colloid chemistry

1	Macromolecular and colloid chemistry in forest products technology	173
2	Fundamental properties of interfaces, macromolecules, and colloids	174
2.1	Interfacial tension	174
2.2	Adsorption	175
2.3	Colloids	175
2.4	Dynamic processes in colloidal systems	177
	2.4.1 Flow and relaxation.....	177
	2.4.2 Sediment structure.....	178
2.5	Colloids in pulping and papermaking	179
3	Surface tension, adhesion, and wetting	180
3.1	Molecular interpretation of surface tension	180
	3.1.1 Adhesion and cohesion	181
3.2	The surface energy of solids	182
3.3	Contact angle, wetting, and spreading	183
3.4	Critical surface tension	184
3.5	The strength of adhesive joints	184
3.6	Intermolecular interactions	185
3.7	Determination of <i>LW</i> and <i>AB</i> properties of surfaces	185
3.8	The Young-Laplace equation	187
3.9	The Kelvin equation	188
4	Adsorption	189
4.1	Surface concentrations	189
4.2	The Gibbs adsorption equation	191
4.3	Adsorption at the air-liquid interface	191
4.4	Adsorption at the solid-liquid interface	192
	4.4.1 Classification of isotherms	192
	4.4.2 Adsorption model.....	193
4.5	Adsorption at the gas-liquid interface	194
	4.5.1 Classification of isotherms	194
	4.5.2 The Langmuir isotherm	196
	4.5.3 The BET isotherm	196
5	Surfactants	197
5.1	Amphiphilic molecules	197
5.2	Micelles	199
5.3	Factors affecting micelle formation	201

CHAPTER 4

5.4	The surfactant number	202
5.5	Kinetics of micelle formation	203
5.6	Solubilization	203
5.7	Lyotropic liquid crystalline phases	204
5.7.1	Binary systems	204
5.8	The Krafft boundary	206
5.9	Surfactants in pulping and papermaking	206
5.9.1	Formation of micelles and solubilization.....	206
5.9.2	Solubility and formation of liquid crystalline phases.....	208
5.10	Adsorption of surfactants at solid surfaces	209
5.10.1	General description.....	209
6	Polymers in solution	212
6.1	The chemical structure of polymers	212
6.1.1	Molecular weight, polydispersity, degree of substitution.....	213
6.1.2	The conformation and dimensions of polymers.....	214
6.1.3	The radius of gyration.....	216
6.2	Polymer solubility	217
6.3	The Flory-Huggins theory of polymer solubility	218
6.3.1	Regular solutions	218
6.3.2	The Flory-Huggins theory of polymer solutions.....	221
6.3.3	The θ temperature	223
6.3.4	Interaction parameter and solubility parameter	223
6.4	Polyelectrolytes	224
7	Interaction of polymers with solid surfaces	226
7.1	Characteristic features of polymer adsorption	226
7.1.1	The effect of molecular weight on adsorption.....	227
7.1.2	The effect of polydispersity.....	227
7.1.3	Adsorption in turbulent flow	229
7.1.4	Adsorption of polyelectrolytes	229
7.1.5	Desorption of polymers	231
8	The stability of lyophobic colloids	231
8.1	What is colloidal stability?	231
8.2	Van der Waals interactions	233
8.3	Electrostatic interactions between particles in liquids	235
8.3.1	The origin of surface charge.....	235
8.3.2	The structure of the electric double layer.....	238
8.3.3	Charge and potential in the Stern layer	239
8.3.4	Ion distribution in the diffuse layer	239

CHAPTER 4

8.3.5	Exchangeable ions	242
8.4	Electrostatically stabilized colloids	243
8.4.1	Interaction between double layers	243
8.4.2	The DLVO theory of colloidal stability	245
8.5	Kinetics of coagulation	248
8.5.1	Coagulation of dilute dispersions.....	248
8.5.2	Brownian motion	249
8.5.3	Coagulation in the presence of colloidal interactions – the stability ratio.....	250
8.6	Electrophoretic mobility and zeta potential	252
8.6.1	Electrophoretic mobility and electrophoresis.....	252
8.6.2	The zeta potential.....	254
8.6.3	The isoelectric point	254
8.6.4	The streaming potential	256
8.7	Determination of surface charge by titration	256
8.7.1	Conductometric titration.....	256
8.7.2	Potentiometric titration.....	258
8.7.3	Polyelectrolyte adsorption	259
9	The effects of polymers on colloidal stability	259
9.1	General	259
9.2	Steric stabilization	260
9.2.1	Properties of sterically stabilized colloids.....	260
9.2.2	Steric stabilization and polymer solubility.....	261
9.2.3	Distance dependence of steric stabilization	263
9.3	Polymers as flocculants	264
9.3.1	Charge neutralization.....	265
9.3.2	Flocculation by bridging	266
9.3.3	Patch flocculation	269
9.3.4	Polyelectrolyte complexes	269
9.4	Hydrodynamic interactions	270
	References	273

CHAPTER 5

Brightness reversion

1	Introduction	279
2	Concepts related to brightness reversion/yellowing/discoloration	279
2.1	Chromophore formation	279
2.2	Determination of brightness, Y value, and opacity	281
2.3	Light absorption and light scattering	282
2.4	Ways to calculate brightness reversion	283
2.4.1	Brightness changes	283
2.4.2	Post color numbers	283
2.5	Ways to evaluate changes in the optical properties	284
2.5.1	Color measurements	284
2.5.2	UV-VIS spectra: <i>R</i> , <i>k</i> , and <i>s</i> spectra	284
2.5.3	Fluorescence	286
2.5.4	Other methods.....	288
3	Standard methods to evaluate brightness reversion/yellowing	288
4	Focus on the wood – pulp – paper cycle	290
4.1	Complexity of the reversion problem	290
4.2	The end product	290
4.3	Strategies to solve the reversion problem	291
5	Yellowing behavior and the diversity of pulps	291
5.1	Mechanical pulps	291
5.2	Chemimechanical pulps	292
5.3	Chemical pulps	292
6	Photochemical and thermal yellowing	292
6.1	Light sources	292
6.2	Surface and bulk phenomena	293
6.3	Effect of both light and heat	294
7	Effect of humidity and oxygen	295
8	Factors affecting brightness reversion: Content-related factors	296
8.1	The raw material	296
8.2	Process water	296
8.3	Metal ions	297
8.4	pH	298
8.5	Extractives	299
8.5.1	Oxidation of extractives	299
8.5.2	Nonvolatile and volatile products.....	300
8.5.3	Highly colored extractives.....	301
8.5.4	Resin acids.....	301

CHAPTER 5

8.6	Lignin and residual lignin	302
8.7	Hemicellulose	302
8.8	Cellulose	303
8.9	Paper chemicals (retention aids, wet-strength reagents, etc.)	304
8.10	Dyes	304
8.11	Fluorescent brighteners (recycled fibers, reclaimed paper)	305
8.12	Coating color components	306
9	Factors affecting brightness reversion: Process-related factors	306
9.1	Pulping method	306
9.1.1	Groundwood and refiner pulps	306
9.1.2	Kraft and sulfite pulps.....	306
9.1.3	Organosolv pulps	307
9.2	Enzyme treatments	307
9.3	Sulfonation	307
9.4	Bleaching	308
9.5	Alkali stage and washing	309
9.6	Microbiological contamination	310
9.7	Drying	310
9.8	Storage and transportation	310
10	Characteristics of chromophore formation: Kinetics and mechanism	310
10.1	Kinetics of chromophore formation	310
10.2	The mechanism of photoyellowing	313
10.3	Monochromatic irradiation of high-yield pulps	314
10.4	Action spectra of pulps and paper	315
10.5	Photocycling of lignocellulosic pulps	316
10.6	Photochromism in cellulosic pulps	317
10.7	Mechanism of thermal yellowing	318
11	Counteracting brightness reversion	319
11.1	Bulk or surface treatment?	319
11.2	Methods of stabilization	320
11.2.1	Modification of functional groups.....	320
11.2.2	Antioxidants and UV absorbers	320
11.2.3	Polymeric stabilizers.....	321
11.3	Mechanical pulps	322
11.4	Chemical pulps	323
11.5	Surface treatment of paper	323
	References.....	324

Forest Products Chemistry. Editor Per Stenius. Volume 3 of the Papermaking Science and Technology Series, published by the Finnish Paper Engineers' Association. This comprehensive text covers the basics of forest products chemistry, beginning with an overview of the structure and chemical composition of wood. The basic chemical processes taking place during wood delignification are also covered, as well as analytical methods for the control of chemical processes.
