Current role of
surgery and multimodal treatment in localized gastric cancer. C. J.H. van de Velde Issue Section: multidisciplinary treatment of gastric cancer Cytoreductive surgery for ovarian cancer: quality assessment · OV21PETROC: a Ovarian Cancer Peritoneal Carcinomatosis Multimodal-Treatment. 5 Mar 2018. The findings also suggest that such a multimodal treatment approach The type of aggressive form of prostate cancer that we focused on has Successful Treatment of Brain Metastases from Ovarian Cancer. 4 Dec 2013. and Targeted Photothermal Treatment on Human Ovarian Cancer Cells By integrating the advantages of multimodal optical imaging and
If you’ve been diagnosed with ovarian cancer, your cancer care team will discuss your treatment options with you. It’s important that you think carefully about each of your choices. Weigh the benefits of each treatment option against the possible risks and side effects. Local treatments. Some treatments are local, meaning they treat the tumor without affecting the rest of the body. Types of local therapy used for ovarian cancer include: Surgery for Ovarian Cancer. Radiation Therapy for Ovarian Cancer. Systemic treatments. Drugs used to treat ovarian cancer are considered systemic therapies because the use of an ovarian cancer risk algorithm that incorporated serum cancer antigen 125 (CA-125) screening was able to double the number of invasive epithelial ovarian or tubal cancers detected, according to the results of a study of the United Kingdom Collaborative Trial of Ovarian Cancer Screening (UKCTOCS) published in the Journal of Clinical Oncology. There is currently no national screening program for ovarian cancer, as research to date has been unable to provide enough evidence that any one method would improve early detection of tumors, said Usha Menon, MD, UKCTOCS coprincipal investigator. The trial investigated a new multimodal strategy for screening for ovarian cancer.
