Geography and Environmental Systems. Department Facts. The Department of Geography and Environmental Systems offers programs of study in environmental science, cartography, environmental studies, geographic information systems, environmental geography and teaching. Geography and environmental systems traditionally encompasses the study of spatial patterns in both the natural and cultural environment. The dynamic and interdisciplinary character of the field is becoming increasingly relevant for a range of societal and environmental problems, including urban and suburban economic development, po Integrated geography (also referred to as integrative geography, environmental geography or human-environment geography) is the branch of geography that describes and explains the spatial aspects of interactions between human individuals or societies and their natural environment, these interactions being called coupled human-environment systems. It requires an understanding of the dynamics of physical geography, as well as the ways in which human societies conceptualize the environment
