boek, Owen, D. F. - Animal ecology in tropical Africa. Second edition.

Tropical forests are found near the Earth's equator. There are two main types of tropical forest: the rainforest and the seasonal forest. Both get more than 8.5 feet of rain every year. Seasonal forests have a wet season and a dry season. However, in the rainforest there isn't a dry season. In a tropical rainforest it rains regularly throughout the year. Tropical forests are the home to a huge number of animal species. In fact, the number of species living in these two types of tropical forests is more than all other habitats combined. More tropical forest information. Animals of the Tropical ecology and development. International Society of Tropical Ecology, Kuala Lumpur. Collins, N. M. 1981. The role of termites in the decomposition of wood and leaf litter in the southern Guinea savanna of Nigeria. Termite distribution in man-modified habitats in West Africa, with special references to species segregation in the genus *Trinervitermes* (Isoptera, Termitidae, Nasutitermitinae). *Journal of Animal Ecology* 34:557-571.
