Framework7 v2 tries to solve this problem by isolating page-specific logic into so called Router Components. If you know what is Vue component, then it will be much easier to understand as it looks pretty similar. So what is Router Component? "Deep learning" frameworks power heavy-duty machine-learning functions, such as natural language processing and image recognition. Singa, an Apache Incubator project, is an open source framework intended to make it easy to train deep-learning models on large volumes of data. Deep-learning framework Caffe is "made with expression, speed, and modularity in mind." Originally developed in 2013 for machine vision projects, Caffe has since expanded to include other applications, such as speech and multimedia. Mastering Entity Framework provides you with a range of options when developing a data-oriented application. You'll get started by managing the database relationships as Entity relationships and perform domain modeling using Entity Framework. You will then explore how you can reuse data access layer code such as stored procedures and table-valued functions, and perform various typical activities such as validations and error handling.
