PDF | Objective: To detect the diagnostic efficiency of ultrasound elastography in differentiation between benign and malignant enlarged cervical lymph nodes. Patient and methods: This study included 27 patients, ranging in age from 21 to 70 years. Enlarged cervical lymph nodes...¹⁸ Ultrasound elastography in pathological enlarged cervical lymph nodes compared to histopathology. Article (PDF Available) in Egyptian Journal of Radiology and Nuclear Medicine 47(4) · August 2016 with 70 Reads. DOI: 10.1016/j.ejrn.2016.07.008. Lymph node biopsy reveals a characteristic histopathology showing follicular hyperplasia with polyclonal plasmacytosis, and paracortical expansion with infiltrating DNT. 18. From: Clinical Immunology (Third Edition), 2008. Related terms¹⁸ Interventional Evaluation. Lymph node aspiration or biopsy is often necessary for an accurate diagnosis of the cause of lymphadenopathy. Fine-needle aspiration is currently popular and is an accurate means of diagnosing infection or carcinoma involving a lymph node. Although lymphomas can occasionally be diagnosed with this approach, it is inappropriate as an initial diagnostic maneuver for lymphoma. Cutting needle biopsy occasionally provides sufficient material for an unequivocal diagnosis and subtyping of the lymphoma. Lymph nodes function as filters of tissues and tissue fluids and are sites of origin and production of lymphocytes for normal physiological functions. As part of this normal function, they react to both endogenous and exogenous substances with a variety of specific morphological and functional responses. Lesions can be both proliferative and nonproliferative, and can be treatment-related or not. The histological evaluation of lymph nodes is necessary in order to understand the immunotoxic effects of chemicals with the resulting data providing an important component of human risk assessment. It
