Often regarded as one of the most technically and emotionally demanding of surgical disciplines, becoming a neurosurgeon requires years of study. This practical guide offers a unique opportunity to see what daily life for a neurosurgeon is like, from someone who has mastered the profession and can explain what the risks and rewards of the job really are. Joshua Bederson is the chief of Neurosurgery at the esteemed Mt. Sinai Hospital in New York City. New Yorker writer John Colapinto brings to vivid life what Dr. Bederson's professional life is like to show all the varied facets of his work, from extensive study and research to brain operations, one-on-one consultations with patients, and even staff meetings with fellow surgeons and students. Since Mt. Sinai is a teaching hospital, we learn alongside the residents and interns how Bederson trains neurosurgeons, passing along the knowledge and skills he honed over decades. The rise of remote work in the past few years has led many SMEs (small and medium-sized enterprises) to look at remote employment as a viable option for growing their business. Many companies, however, still hold reservations about the risks of remote work and whether their team can continue to scale up as the business grows. These are reasonable concerns, primarily because remote work (in its most recent incarnation) is largely unproven as a concept. Modern remote working has simply not been around long enough to prove itself as a solid model for recruitment. But that's not to say that it doesn't work. It's hard to argue against the capitalist practices of old and the corporate structures which have developed over the past one hundred years. Judging by

appearances, these practices are working quite effectively. The big corporations have all been built on these practices, so why should we try/trust something new?
