Physical geographers look at the landscapes, surface processes, and climate of the earth—all of the activity found in the four spheres (the atmosphere, hydrosphere, biosphere, and lithosphere) of our planet. Key Takeaways: Physical Geography. Physical geography consists of many diverse elements. These include: the study of the earth's interaction with the sun, seasons, the composition of the atmosphere, atmospheric pressure and wind, storms and climatic disturbances, climate zones, microclimates, the hydrologic cycle, soils, rivers and streams, flora and fauna, weathering, erosion, natural hazards, deserts, glaciers and ice sheets, coastal terrain, ecosystems, geologic systems, and so much more. The Four Spheres. (companion to Keith Johnston's classical atlas.) The Elements of Physical and Classical Geography, it is comprising the Geography of the Ancient "World, in so far as subservient to the understanding. With an Introduction, containing 1. A Popular illustration of the Classics. Account of the Solar System, and Suggestions as to the best mode of Teaching 3. A Geography; 2. An Outline of the Geological History of the Globe Digest of all that is known of the Properties and Relations of the Heavenly Bodies, arranged in a Tabular Series. By PROFESSOR PILLANS, of the University ; o... Physical and classical Geography. James Pillans, professor of humanity in the University of Edinburgh. Microfilmed by Ontario Univ. Language geography "studies the geographic distribution of language or its constituent elements. There are two principal fields of study within the geography of language: Geography of languages "deals with the distribution through history and space of languages,[13]. Regional geography breaks down into the study of specific regions. Region "an area, defined by physical characteristics, human characteristics, or functional characteristics.
