The Colorado River Basin is divided into the Upper and Lower Basins at Lee's Ferry located in northern Arizona. The Upper Basin spans portions of Wyoming, Colorado, New Mexico, Utah, and northern Arizona. The Lower Basin covers parts of Nevada, Arizona, California, southwestern Utah, and western New Mexico. The Colorado River also supplies water to parts of the states of Baja California and Sonora in northwestern Mexico. — In this activity, your group will explore aspects of the Colorado River Basin using a variety of resources and tools such as Google Maps. It is important to know about the environment and ecology of the region that you are studying in order to get a better sense of the climate signal that the trees are recording. The waters of the Colorado River now rarely reach the Sea of Cortez, depleted as they are by hundreds of upstream reservoirs and diversions - and Collier documents this as well: the stark, muddy delta of the river; the feathery channels that remain as the tides withdraw back to the sea. WATER, EARTH, AND SKY is a mosaic of splendid parts, a unique and dynamic assemblage like the Colorado River basin itself, which, viewed from the right distance, resolves itself into the patterns that make it a marvelous and inspiring whole. ¼Library descriptions. The Colorado River Basin stretches across seven states: from Wyoming across Colorado, Utah, Arizona, New Mexico, Nevada and California. Its groundwater is stored in underground aquifers and is sucked from the ground by wells. If water is removed from an aquifer faster than it can be replaced, eventually the wells will go dry. Castle and her co-authors tracked groundwater loss in the basin with NASA's twin GRACE satellites (for Gravity Recovery and Climate Experiment). The satellites circle the Earth, monitoring the slight changes in Earth's gravity from increases or decreases in wate...
