North America and Adjacent Oceans During the Last Deglaciation. p. 289. CrossRef. Google Scholar. Field relations suggest that late Wisconsin alpine glaciers last advanced prior to the eruption of tephra layers from Glacier Peak about 11,250 yr B.P. Late Wisconsin deglaciation in the central North Cascades was complete prior to the Glacier Peak tephra eruptions. Glaciers again expanded in the early Holocene about 8400 – 8300 yr B.P. Soil formed in alpine meadows during an episode of mild climate in the middle Holocene prior to at least two intervals of glacier expansion: an older episode between 5100 and 3400 yr B.P., and a younger episode within the last 1000 yr. North America and Adjacent Oceans During the Last Deglaciation pp 13-37; doi:10.1130/dnag-gna-k3.13. Publisher Website. Google Scholar. Share this article. Comments from sciforum.
