By enrolling in specific programs and Education Be An Engineer Early Start Online Institutes, Trainings, and Webinars build competencies for. Comprehensive, Equitable Induction of Beginning Science and Mathematics

Science and technology developed as different and separate activities, the former being for several millennia a field of fairly abstruse speculation practiced by a class of aristocratic philosophers, while the latter remained a matter of essentially practical concern to craftsmen of many types. Early in the 17th century the natural philosopher Francis Bacon recognized three great technological innovations—the magnetic compass, the printing press, and gunpowder—as the distinguishing achievements of modern man, and he advocated experimental science as a means of enlarging man’s dominion over nature. Yet the wedding of science and technology proposed by Bacon was not soon consummated. Archaeological discoveries reported this year broadened the scope of what scientists know about Stone Age ingenuity. These finds move the roots of innovative behavior ever closer to the origins of the human genus, Homo. Example No. 1 came from Kenya’s Olorgesailie Basin, where fickle rainfall apparently led to a wave of ancient tool and trading advances (SN: 4/14/18, p. 8). Frequent climate swings in East Africa probably stimulated the creation of new types of stone tools and the formation of trading networks by about 320,000 years ago, said a team led by paleoanthropologist Rick Potts of the
