Request PDF on ResearchGate | Constructing psychopathology from a cognitive narrative perspective. | Argues that narrative is the essential process through which individuals construct meaningful experiences. Psychopathology can be understood as a narrative unable to provide an account of the diversity of this sensorial, emotional and cognitive stimulation while, simultaneously, failing to provide narrative coherence. A patient's personal point of view is not mere enumeration of oppressive symptoms but rather an attempt to make symptoms meaningful, to link these problems with his or her own life story, and to present themselves in a world marked by certain characteristics. Negative schemas and cognitive biases maintain the negative triad, a pessimistic view of the self, the world (not being able to cope with the demands of the environment) and the future. AO3. It may be that negative thinking generally is also an effect rather than a cause of depression. The precise role of cognitive processes is yet to be determined. It is not clear whether faulty cognitions are a cause of the psychopathology or a consequence of it. Sometimes these negative cognitions are in fact a more accurate view of the world: depressive realism. Cognitive theories lend themselves to testing. When experimental subjects are manipulated into adopting unpleasant assumptions or thought they became more anxious and depressed (Rimm & Litvak, 1969). Treatment - CBT.
