Los Angeles and California became part of the United States at the end of the Mexican-American War in 1848. The geologic instability produces numerous fault lines both above and below ground, which altogether cause approximately 10,000 earthquakes every year.[5] One of the major fault lines is the San Andreas Fault. Located at the boundary between the Pacific Plate and the North American Plate, it is predicted to be the source of Southern California's next big earthquake. Parts of the city are also vulnerable to Pacific Ocean tsunamis. Climate.
