This course studies the fundamentals of Statistics Inference and teaches you how to draw the right conclusions and interpretations about a model that has generated your data set. In this course you will learn which are the most efficient statistical inference procedures used in practice and will understand in what sense these procedures are considered to be efficient. MATH3811/MATH3911 is a core course of a Statistics major. The course will cover a variety of topics including: uniformly minimum variance estimation; Cramer-Rao inequality and Lehmann-Scheffe theorem; Monotone likelihood ratio di Statistical inference is the process through which inferences about a population are made based on certain statistics calculated from a sample of data drawn from that population.
