<b>Preface</b>	<b>XIX</b>
<b>Acknowledgement</b>	<b>XXI</b>
<b>PART I THE WIRELESS INTERNET</b>	<b>1</b>
<b>1 An Introduction to Wireless Mobile Internet</b>	<b>3</b>
1.1 Telecommunication Technologies	3
1.1.1 Telecommunications: Wired, wireless, and cellular	4
1.1.2 Internet: Fixed, wireless, and mobile	7
1.2 Trends Toward Wireless Internet	9
1.2.1 Access technology: Fixed and mobile	9
1.2.2 Increase in Internet usage	10
1.2.3 Telecommunication services for everyone	11
1.2.4 Mobile cellular technologies coverage	12
1.2.5 Telecommunication traffic: Voice, data, and multimedia	13
1.2.6 Mobile Internet traffic	13
1.3 Wireless Internet Requirements	14
1.3.1 Extension of Internet with mobility features	14
1.3.2 Internet connection specifications and QoS	15
1.3.3 Change in Internet protocols	15
1.3.4 Authentication, authorization, and accounting	16
1.3.5 Resource management	17
1.3.6 Changing the network architecture	17
1.4 Outline of the Book	18
References	20

<b>2</b>	<b>Wireless Cellular Data Networks</b>	<b>23</b>
2.1	Introduction	23
2.1.1	Circuit switching	24
2.1.2	Packet switching	24
2.1.3	Access network	25
2.1.4	Core network	26
2.2	Second-Generation Cellular Data Services	27
2.2.1	Cellular digital packet data	28
2.2.2	High-speed circuit-switched data	30
2.3	Recent Advanced Cellular Data Services	32
2.3.1	Wireless application protocol	32
2.3.2	i-mode	36
2.3.3	Freedom of multimedia access	39
2.4	Standardization Organizations	40
2.4.1	International Telecommunication Union	40
2.4.2	European Telecommunications Standards Institute	41
2.4.3	Universal Mobile Telecommunications System Forum	42
2.4.4	Third-Generation Partnership Project	42
2.4.5	Third-Generation Partnership Project 2	44
2.4.6	Internet Engineering Task Force	45
2.4.7	Mobile Wireless Internet Forum	46
2.5	Summary and Conclusions	46
	References	47
<b>3</b>	<b>Cellular Mobile Networks</b>	<b>51</b>
3.1	Global System for Mobile Communications	52
3.1.1	GSM architecture	53
3.1.2	GSM bandwidth allocation	55
3.1.3	GSM control and data channels	55
3.1.4	GSM system features	57
3.1.5	GSM network architecture	58
3.1.6	DCS1800 and PCS1900	60
3.2	General Packet Radio Service	60
3.2.1	GPRS architecture	62
3.2.2	GPRS new routers	62
3.2.3	GPRS signaling	65
3.2.4	GPRS mobility management	66
3.3	Enhanced General Packet Radio Service	67
3.3.1	EGPRS phase 1	69
3.3.2	EGPRS phase 2	70
3.4	Universal Mobile Telecommunication System	71
3.4.1	<i>Evolution at all logical layers</i>	72
3.4.2	UMTS network architecture	74
3.4.3	UMTS core and radio access network	76

---

3.4.4	UMTS modes of operation	77
3.4.5	UMTS network protocol	79
3.4.6	UMTS open service architecture	84
3.5	Summary and Conclusions	87
	References	87
<b>4</b>	<b>Mobile Networks of the Future</b>	<b>91</b>
4.1	IMT-2000	91
4.1.1	IMT-2000 standards family	92
4.1.2	cdma2000	94
4.1.3	IMT-2000 standards harmonization	96
4.2	Beyond Third-Generation Systems	98
4.2.1	4G mobile: Interconnecting networks	99
4.2.2	All-IP networks	101
4.2.3	A modular approach toward 4G mobile	101
4.2.4	Mobile Wireless Internet Forum	104
4.3	Future Mobile Internet Applications	107
4.3.1	Common Internet applications	110
4.3.2	Mobile only applications	110
4.4	Layered Architecture for the Future Mobile Internet	110
4.4.1	Approaching the mobile Internet	111
4.4.2	Layered architecture	112
4.4.3	Network management level	115
4.5	Summary and Conclusions	118
	References	118
<b>PART II</b>	<b>FUNDAMENTAL TOPICS IN WIRELESS IP</b>	<b>123</b>
<b>5</b>	<b>Quality of Service in a Mobile Environment</b>	<b>125</b>
5.1	Defining the Quality of Service	125
5.1.1	User-level QoS requirements	126
5.1.2	Technology and network QoS requirements	128
5.1.3	Correlation between the QoS indicators	131
5.2	Quality-of-Service Guarantee in IP Networks	133
5.2.1	Packet classification	133
5.2.2	Packet isolation	134
5.2.3	Efficient resource management	135
5.2.4	Traffic load control	135
5.2.5	Summary	136
5.3	Internet Solutions to Quality-of-Service Provisioning	137
5.3.1	Integrated services	137
5.3.2	Differentiated services	138
5.3.3	Comparison between IntServ and DiffServ	140
5.3.4	IntServ over DiffServ	140

5.4	Cellular Network Solutions to Quality-of-Service Provisioning	141
5.4.1	GPRS quality-of-service support	141
5.4.2	UMTS quality-of-service support	142
5.5	Quality-of-Service Establishment in Mobile Networks	143
5.6	Summary and Conclusions	144
	References	145
<b>6</b>	<b>Traffic Modeling for Wireless IP</b>	<b>149</b>
6.1	Introduction	149
6.1.1	Emerging trend of the next-generation mobile traffic	150
6.1.2	Importance of traffic modeling	151
6.1.3	Traffic modeling criteria	151
6.2	Poisson and Markov Models	152
6.2.1	Limitation of the Poisson and Markov traffic models	152
6.2.2	The need for new traffic models	153
6.3	Characteristics of the Emerging Traffics	154
6.3.1	Heavy-tailed	154
6.3.2	Self-similar	156
6.3.3	Fractal	158
6.3.4	Long-range-dependence	159
6.3.5	Suitability of self-similar and long-range dependence	159
6.4	Self-Similar and LRD Traffic Models	161
6.4.1	Traditional traffic models	161
6.4.2	Current and future models	162
6.4.3	Traffic models for the Internet applications	166
6.5	Short-Range and Long-Range Dependence Models	172
6.5.1	Self-similar traffic models	172
6.5.2	Long-range-dependence traffic models	172
6.6	Summary and Conclusions	174
	References	175
<b>7</b>	<b>Traffic Management for Wireless IP</b>	<b>177</b>
7.1	Introduction	177
7.2	Admission Control	181
7.2.1	Parameter-based admission control	182
7.2.2	Measurement-based admission control	183
7.2.3	Quality of service parameters	185
7.3	Wireless IP Networks	185
7.3.1	Wireless access networks	186
7.3.2	Wireless LAN—The IEEE 802.11 standard	186
7.3.3	Unique characteristics of a wireless LAN	188
7.3.4	Admission control in wireless IP networks	189

---

7.4	Measurement-Based Admission Control	191
7.4.1	Network-load estimation	191
7.4.2	Measurement parameters	192
7.4.3	Possible sources of error	194
7.4.4	Suitability of MBAC in wireless IP networks	195
7.5	Implementation of Measurement-Based Admission Control	196
7.5.1	Network reference model	196
7.5.2	Wireless IP networks characteristics	197
7.5.3	Simulation descriptions	197
7.6	Traffic Management Parameters	200
7.6.1	Choice of the parameters	201
7.6.2	Verification of the simulation	205
7.7	Comparison Between Priority and Reservation Schemes	207
7.7.1	Without reservation or priority	208
7.7.2	Reservation	216
7.7.3	Priority	226
7.7.4	Priority versus reservation	235
7.8	Summary and Conclusions	243
	References	244
<b>8</b>	<b>Mobility in Cellular Networks</b>	<b>247</b>
8.1	Introduction	247
8.2	Mobility Models	249
8.2.1	Topology models	250
8.2.2	Movement models	252
8.2.3	Residence time models	257
8.2.4	Call-arrival models	261
8.3	Location Management Schemes	263
8.3.1	Update strategies	263
8.3.2	Paging	275
8.3.3	Final remarks	282
8.4	Analytical Framework for Location Management	283
8.4.1	Influential factors	284
8.4.2	Overall cost function	285
8.4.3	Update cost	287
8.4.4	Optimal boundary assignation	303
8.4.5	Paging cost	312
8.4.6	Partition algorithms	315
8.5	Summary and Conclusions	318
	References	319
<b>9</b>	<b>Transport Protocols for Wireless IP</b>	<b>325</b>
9.1	Introduction	325

---

9.2	Overview of the Transmission Control Protocol	326
9.2.1	TCP/IP architecture	327
9.2.2	General features in TCP	328
9.2.3	TCP segment structure	329
9.2.4	TCP flow control	330
9.2.5	TCP time-out mechanism	331
9.2.6	TCP congestion control	331
9.2.7	Some conclusions on TCP	334
9.3	Transmission Control Protocols for Wireless Channel	335
9.3.1	Exploring the problem	335
9.3.2	TCP performance expectation in wireless channel	336
9.3.3	TCP enhancements	338
9.4	Explicit Loss Notification with Acknowledgement	340
9.4.1	A new acknowledgement packet	341
9.4.2	A new agent at base station	341
9.4.3	Procedure at TCP sender	342
9.5	Performance Analysis	343
9.5.1	Simulation environment	343
9.5.2	Throughput performance	344
9.5.3	Delay performance	345
9.5.4	Congestion window performance	349
9.6	Transmission Control Protocols for Cellular Networks	350
9.7	Summary and Conclusions	351
	References	352
<b>10</b>	<b>Internet Protocol for Wireless IP</b>	<b>355</b>
10.1	Introduction	355
10.2	Overview of the Internet Protocol	356
10.2.1	Hierarchical routing in the Internet	357
10.2.2	Internet control message protocol	359
10.2.3	General features of Internet protocol	359
10.3	Internet Protocol Version 6	362
10.3.1	IPv6 motivations	362
10.3.2	IPv6 header format	363
10.3.3	Internet protocol transition	364
10.3.4	Current status of IPv6	366
10.3.5	Wireless: Direction for IPv6	367
10.4	Mobile IP	368
10.4.1	Protocol overview	368
10.4.2	Performance issues in Mobile IPv4	371
10.4.3	Mobile IPv6	375
10.4.4	Handover in Mobile IPv6	375
10.4.5	Hierarchical mobility agent	377
10.5	Cellular IP and HAWAII	377

---

10.5.1 Cellular IP	378
10.5.2 HAWAII	380
10.5.3 Cellular IP versus HAWAII	381
10.6 Summary and Conclusions	381
References	382
<b>PART III ADVANCED TOPICS IN WIRELESS IP</b>	<b>385</b>
<b>11 Internet Perspectives on Wireless IP</b>	<b>387</b>
11.1 Packet Data Services	387
11.1.1 Access layer	389
11.1.2 Data link layer	389
11.1.3 Network layer	390
11.1.4 Security	390
11.2 Packet Data Services—A Functional Model	390
11.2.1 Home agent	391
11.2.2 Packet data serving node	391
11.2.3 Authentication, authorization, and accounting	392
11.2.4 Packet control function	393
11.2.5 Radio resource control	393
11.2.6 Mobile station	394
11.3 Architecture Models	394
11.4 Summary and Conclusions	397
References	398
<b>12 Mobile Ad Hoc Networks and Future Challenges</b>	<b>401</b>
12.1 Introduction to Mobile Ad Hoc Networks	401
12.1.1 Wireless LAN	402
12.1.2 Ad hoc networking using the wireless LAN	402
12.1.3 IEEE 802.11 specifications	404
12.2 Integrated Ad Hoc Power Management	405
12.2.1 Device power consumptions	406
12.2.2 Power managements	406
12.3 MAC Protocol for Ad Hoc Networks	407
12.4 Quality of Service Support for Ad Hoc	408
12.5 Ad Hoc Service Discovery Architectures	409
12.6 Forwarding Models and Incentives	410
12.7 Ad Hoc Addressing and Naming	412
12.8 Connection Precedence and Preemption	413
12.9 Summary and Conclusions	414
References	415
<b>13 Satellites in Wireless IP</b>	<b>417</b>
13.1 Introduction	417

---

13.2 Overview of Satellite Communications	418
13.2.1 Mobile satellite services—First generation	418
13.2.2 Mobile satellite services—Second generation	418
13.2.3 Broadband satellite systems	420
13.3 Satellite for the Global Internet	422
13.3.1 Connection architecture of satellites	422
13.3.2 Application of satellites	422
13.4 Satellite in Third-Generation Wireless Networks	424
13.5 Technical Issues for Satellite-Based Internet Implementation	427
13.5.1 Mobility management	427
13.5.2 Location management	429
13.5.3 Routing management	429
13.5.4 Handoff management	429
13.5.5 Quality of service management	430
13.6 Mobility Management in Satellite and Terrestrial Networks	430
13.6.1 Satellite networks	431
13.6.2 Cellular networks	431
13.6.3 Handoff management versus location management	432
13.7 Satellite Transport of the Internet Traffic	432
13.7.1 TCP imperfections	433
13.7.2 TCP enhancements	433
13.8 Summary and Conclusions	434
References	436

<b>About the Author</b>	<b>461</b>

A wireless network is a computer network that uses wireless data connections between network nodes. Wireless networking is a method by which homes, telecommunications networks and business installations avoid the costly process of introducing cables into a building, or as a connection between various equipment locations. Wireless telecommunications networks are generally implemented and administered using radio communication. This implementation takes place at the physical level (layer) of the OSI Stay connected anywhere with high speed Mobile Internet service on the TELUS 4G network. Find the best wireless internet plan and stick, hub, or hotspot for you.Â Mobile Internet. Need to connect 1 device, or up to 32? No problem. Our Mobile Internet devices go with our Mobile Internet plans so youâ€™re always connected, wherever you go. Smart Hub. LTE Advanced Enabled: LTE Cat 6 allows users to experience download speeds up to 300Mbps and upload speeds up to 50Mbps.
