Motion graphics are utilized in explainer videos, branding packages, title sequences, UI / UX and other mediums. It combines with graphic and animation, including text, infographics or voice-over if necessary, to describe a relatively complex concept in a concise and interesting way. Transition is broadly used to make the storytelling fluent and natural. There is a huge variety of transitions in motion graphics. Summarizing the ideas is very helpful to improve work efficiency and optimize workflow. The following is 4 types of transition in motion graphics I concluded.

1. Shape Transition: How shape transition works is animating in the shape to fill the entire screen and turning the scene to the next one when animating out.
