Figure 1.1 Block diagram of pattern recognition system. 1.2 Template Matching. One of the simplest and earliest approaches to pattern recognition is based on template matching. In template matching, a template (typically, a 2D shape) or a prototype of the pattern to be recognized is available. It is not easy to form a well-balanced and well-informed summary view of the newest developments in this field. It is still harder to have a vision of its future progress. This review throws light on the rudimentary as well as few advanced concepts of statistical pattern recognition.
