"Nemesis: The Death Star" is the story of a possible explanation for periodic comet and asteroid impacts on Earth and other members of the Solar System. In brief, Dr. Richard Muller of Cal-Berkley believes that our Sun may have an as yet undetermined companion star (remember, many stars are part of binary systems). There are about 3,000 stars which meet the basic qualifications for our Sun's binary companion: visual magnitude Read More. Upon Stalin's death, Beria, with his network of spies and contacts, seemed poised to take over. But he fatally underestimated his opponents. As Khrushchev, the outsider, would soon show, the struggle for who would fill the power vacuum left in Stalin's absence was just beginning. Like this article? SIGN UP for our newsletter. Want to Read. Greeted with disbelief and derision, the "Nemesis" hypothesis has nonetheless withstood attempts to demolish it and has provided explanations for a variety of phenomena. In 1984 Dr Muller caused international controversy with his theory that a killer star, christened "Nemesis", is orbiting the sun and causing cataclysmic comet storms to batter the earth every 26 million years. This is the story of scientists who found a thin layer of extraterrestrial material spread across the planet. Wherever they found it, the layer occurred at the same time as a mass extinction.
