Several articles covering noted Tourmaline producing localities are featured in this Minerals of the Tourmaline Group - McDougall Minerals Schiffer Publishing Collector's Guide to the Tourmaline Group - Among rock-forming minerals, the colorful tourmaline group is a favorite of both mineral. COMPOSITIONAL VARIATION OF TOURMALINE-GROUP. Mineral Group: Tourmaline group. Occurrence: In granites and granite pegmatites, high-temperature hydrothermal veins, and some metamorphic rocks also Tourmaline - Wikipedia, the free encyclopedia Fine minerals, tourmaline, dravite, elbaite, magnesiofoitite. Browse Catalogue Browse By Mineral Group Tourmaline Group. Default, Sort by Price Low Ferridravite, a new mineral of the tourmaline group from Bolivia Coupled substitutions in the tourmaline group - Springer Tourmaline group. A group of complex cyclosilicates of boron and aluminum, the structure of which is based on six-membered rings of SiO_4 4? tetrahedra. Classification of the minerals of the tourmaline group Methods of Verification: Classification of tourmaline into alkali, calcic and vacancy groups Hawthorne & Henry, 1999. Classification of tourmaline groups into Novák et al. 2009 Nomenclature of the Tourmaline-Group - A1 Abstract. Statistical analysis of 136 natural tourmaline compositions from the literature reveals the presence and extent of coupled substitutions involving several

Tourmaline. Tourmalines have a wide variety of exciting colors with one of the widest color ranges of any gem. 26.32-ct. This 26.32-ct. oval pink tourmaline is from Mozambique. Rubellite. Trade name for pink, red, purplish red, and orangy red tourmaline. Inclusions. It's not unusual for pink tourmalines to have eye-visible inclusions. California. Collector's Guide to the Tourmaline Group Robert J. Lauf. Tourmaline: A Gemstone Spectrum Brian C. Cook. This Month's. The most common species of tourmaline is schorl, the sodium iron (divalent) endmember of the group. It may account for 95% or more of all tourmaline in nature. The early history of the mineral schorl shows that the name "schorl" was in use prior to 1400 because a village known today as Zschorlau (in Saxony, Germany) was then named "Schorl" (or minor variants of this name). Members of the Tourmaline Group are favorites among mineral collectors. Their rich and varied colors can captivate the eye. Even the black opaque tourmalines can shine nicely and produce sharp crystal forms. The Tourmaline Group has a general formula of $AX_3Y_6(BO_3)_3Si_6O_{18}(O, OH, F)_4$. The A can be either calcium or sodium. The X can be either aluminum, iron, lithium or magnesium. The Y is usually aluminum, but can also be chromium or iron.
